SCIE258 HW3: Timeline

Develop a timeline similar to the provided example. Your timeline should have reasonable coverage of the period studied in our course (roughly, 1500 to the present day). The timeline should list years and descriptions of events in four categories described in more detail below. Make sure to achieve reasonable coverage with at least a few events in every century, in each of the four categories. The four categories are:

- **Scientific events:** List at least two or three events relevant to every site visited and every assigned reading, supplemented with additional events of personal interest.
- **Cultural or political events:** List cultural or political events that you are personally interested in or have particular importance for our course.
- **Events relevant to Professor Mitchell's HUM209 course,** *London and Londoners: A Cultural History*: There may be considerable overlap with the other categories here, but the important thing is to talk with students taking the HUM209 course and list events that are relevant to their course.
- **Reigns of British monarchs:** List all of the monarchs that reigned for more than two or three years, specifying the year in which the reign started.

Feel free to download the provided example in Excel and add your own events to it. But you also have full creative freedom to use a different software program to develop and present your timeline.

This assignment is divided into four parts: HW3a, HW3b, HW3c, HW3d. Each part will be graded separately based on the progress that has been made since the previous part. You are expected to continuously develop your timeline as we proceed through the course, adding events every time you do a reading or visit a site. So for each of the assignment submissions, please submit the complete timeline you have developed up to that point in the course. For ease of grading, highlight events added since the previous submission in a different color.

The final version of your timeline should contain at least 100-200 events and the earlier versions should demonstrate reasonable progress towards that goal.

Please submit each part of the assignment to Moodle in PDF format.
